### **DETAILED ACTION**

1. Claims 1-12 and 19, 21-24, 26-27, 30 and 33-37 are pending.

#### ***Claim Objections***

2. Claim 7 is objected to because of the following informalities:
  - a. The first chemical structure is not drawn properly. The bonds are not connected in the non-heterocyclic ring.
  - b. In claim 7, the second chemical structure (page 14) with variable "Xo" in the ring, there is no corresponding definition. Applicants defined "X<sup>o</sup>" instead of defining "Xo". Applicants have to be consistent in defining the variables.

Appropriate correction is required.

#### ***Objection***

3. Claims 35-37 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 1624

Claim 34 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention:

a. In claim 34, the phrase "claims 1 to 13" is incorrect. Claim 13 is a cancelled claim.

b. In claim 34, the phrase "Y is carbon and has the conformation that would result from construction from D- $\alpha$ -aminoacid  $\text{NH}_2\text{-CH}(\text{Cy})\text{-COOH}$  where the  $\text{NH}_2$  represent part of X-X" is not clear. Is Y the result of an inversion or retention of a said construction? Reaction can go with retention or inversion of stereochemistry.
